

NGO LE QUANG DAT

FabLab Specialist (Technical)

Phone: 0327 125 737 | **Email:** ngolequangdat08122003@gmail.com

Portfolio: <https://portfolio-one-navy-44.vercel.app/>

SUMMARY

Possess a strong foundation and interest in Physics, Electronics, and IT. Enthusiastic about exploring new technologies, especially modern AI applications, with the goal of directly integrating AI and automation into practical work to effectively solve technical requirements.

EDUCATION

University of Science, Viet Nam National University Ho Chi Minh City

8/2021 - 12/2025

Major: Physics and Computer Science - GPA: 7.83/10

Honors Bachelor's Program in Physics - Faculty of Physics and Engineering Physics

SKILLS

Programming Languages: JavaScript (ES6+, Async/Await), C++, HTML5, CSS3, Python, Matlab.

Backend & System Integration: Node.js (Express), RESTful API, Authentication (JWT, Bcrypt).

Frontend & UI Libraries: ReactJS, Tailwind, Responsive Design.

Hardware & Protocols: ESP32, I2C, Websocket, WebRTC.

Database & Data Handling: MySQL, MongoDB (NoSQL).

Tools & Version Control: GitHub, VS Code, Word, Excel, PowerPoint

Soft skills: Team collaboration, Time management, AI-Driven Productivity.

GRADUATION PROJECT

◆ Online experiment: Curie temperature of ferromagnetic materials

Key Technologies: ESP32, I2C, Node.js, WebSocket, Chart.js, Linux VPS.

- Built an online experiment system for Curie temperature measurement with real-time monitoring.
- Implemented IoT data acquisition using ESP32 via I2C and server-side processing.
- Developed a real-time data streaming system using WebSocket for live experiment updates.
- Draw graphs directly using data obtained through chart.js.
- Enabled session data management with JSON export functionality for research analysis.
- Deployed the application on a Linux VPS for remote laboratory access and control.

Link github: <https://github.com/Dat8122003/KLTN.git>

◆ E-commerce website

Key Technologies: ReactJS, Node.js (Express), MongoDB, RESTful API, Responsive Design, Bootstrap, JWT, Bcrypt.

- Built a full-featured e-commerce site for collectible models with a responsive frontend and a RESTful API backend.
- Implemented Authentication & Authorization using JWT and Bcrypt to manage secure access for Guests, Registered Users, and Admins.
- Developed an Admin Dashboard for inventory management (CRUD), enabling real-time stock updates (auto-decrease on purchase) and order status tracking.
- Enhanced user experience with key features: product search, persistent shopping cart, and order history tracking.
